SUMMARY

Nearly 5 years designing B2B SaaS and web products. Design Lead at Rsquare Web Studio since Jan 2022, for clients in India, Canada and the UK. Strongest where the hard part is the rules: who can do what, how work moves between roles, and which screen each field ends up on.

EXPERIENCE

Design Lead | Rsquare Web Studio, Thane

Jan 2022 - Present

Stratalite | B2B SaaS, Vancouver, live in beta

[Case study](#)

Property companies post work to vendors, and vendors complete it under the company's managers. 5 roles, plus accounts payable, who pay through a shared link without an account.

- Designed the access model before the screens: a **permission matrix of 5 roles x 13 actions** in 5 domains, with conditional rules such as "assigned property only".
- Defined the IA (**13 sections, 118 screens**) from a stakeholder map, 4 personas and 11 journey maps, then designed about 210 screens through to handoff.
- Put the invoice inside **"Mark as complete"**, so one action closes the work and starts payment; that invoice amount feeds 6 of 10 company-admin dashboard numbers.
- Traced **35 fields in 6 forms to 18 dashboard outputs** and agreed 10 KPIs with the client before designing a dashboard, so every number on screen has a source.

PCC Roofing | Pacific Coast Contracting, Vancouver home services

[Case study](#)

- Recommended splitting one contractor into **4 brands with 4 websites** from competitor and keyword research; the client accepted it.
- Did the **visual design** of the sites and planned sitemaps where every page targets one search intent; the dev team built **88 pages** across 4 sites from those designs.
- Audited the roofing site against its 64-page plan and found **20 pages missing**; logged 27 issues across the 4 brand catalogs.

AI in the design workflow | Claude and Codex

- Directed AI agents to map **237 user flows** across Stratalite's 5 roles into FigJam boards, then reviewed and corrected the boards across roles.
- Built flowmap with Claude, a tool that lays a live web app's screens out as a **FigJam flow board**; built and published ExportKit, a Figma Community plugin for WebP and AVIF export.

UI/UX Designer | Student Junction (Skooltag)

2021 - 2022 | [Case study](#)

Delhi NCR school-uniform retailer, offline since 1989, moving online with a parent ordering app and a back office.

- Created Skooltag's **brand identity from zero** (logo, colours, asset kit); it now runs on the store signage.
- Built the **design system** from zero: components, colour and type styles, and spacing tokens.
- Designed the parent app through **5 iterations** around how parents buy in the shop: a child switcher and 3 size checks; handed off 85 screens in 14 flows.
- Mapped the **back office** for admin, store and delivery roles: 3 journey maps, 272 flow steps and a 15-page requirements document (SRS).

SKILLS

Design: information architecture, user roles and permissions, interaction design, user flows, journey maps, wireframing, prototyping, visual design, design systems, developer handoff

Product: requirement documents (SRS), data-to-dashboard mapping, KPI definition, design-vs-build review, client and developer collaboration

Tools: Figma, FigJam, Notion, Linear, Google Sheets, GA4, Microsoft Clarity, WordPress

Technical: HTML, CSS, JavaScript, Node.js, AI agents (Claude, Codex) for flow mapping and building design tools

EDUCATION

B.E. Computer Engineering | University of Mumbai

2024
