SUMMARY

4+ years building web and SaaS products for business clients in India and Canada. With no product manager on the team, I did the product owner's job from the design seat: goals, requirements, what to build first, testing and client sign-off. Results: reply time to new leads cut from 4-8 hours to about 30 minutes, cost per lead down from CA$80 to CA$43 (shared with the ads marketer), and 18 months taking one B2B SaaS platform from first sketch through beta and clean-up.

WORK EXPERIENCE

Design Lead | Rsquare Web Studio, Thane
Jan 2022 - Present

- Acted as product owner on Stratalite (18 months) and Pacific Coast Contracting (replies in about 30 minutes) with no product manager: framed the problem, set goals the client could check, and decided the order of work and what to leave out.
- Wrote what developers build from (who can do what, business rules, edge cases) and tested the build against it in user acceptance testing (UAT): 106 test cases on Stratalite.

UI/UX Designer | Student Junction (Skooltag)
2021 - 2022

Delhi NCR school-uniform retailer going online. Two designers, three developers, no product manager.

- Wrote the back-office requirements before any back-office screens existed: a **15-page requirements document** (SRS) for 4 modules, with 3 journey maps and **272 steps** of flows for the admin, store manager and delivery agent.
- Split the build into **3 phases** with two estimates (1.5 months design, 5 months development), and put open questions to the client in writing beside the step each one affected.
- Co-designed the parent ordering app over **5 rounds** (**85 screens in 14 flows**), asking for school, class and house once, like a shopkeeper. Created the brand from zero; it is now on the shop sign.

PROJECTS

Stratalite - B2B SaaS for property managers, Vancouver. Design Lead **Case study** | **Testing study**

Repairs ran over WhatsApp, email and calls; now one platform holds hiring, quotes, work and payment. Team of three.

- Scoped it before any screen: decided what Stratalite does itself and what it only connects to (payments, banking, insurance), and who can do what for **5 user types**.
- Moved the invoice inside "Mark as complete", so one action closes the job and starts the payment. Agreed **10 dashboard numbers** with the client, each traced to real data.
- Ran a small beta, then pulled it back when real use showed problems that touch money. Directed AI-assisted testing (**106 test cases**, 3 rounds, all roles), ranked problems by business risk so money and work were fixed first. Most are patched.
- Mapped the live product role by role (**237 flows**) and wrote **87 client questions**, each marked blocker, decision or clarification.

Pacific Coast Contracting (PCC) - contractor with four brands, Vancouver. Design Lead **Case study**

Four brands, four websites, some leads quietly lost. The client asked for more leads. Team of four.

- Changed the ask from "more leads" to "stop losing the ones we have", with four goals to check at the end: one place for every lead, none lost, fast replies, a known cost per lead.
- Set the order of work: one CRM, instant alerts and WhatsApp follow-up, ads last. Persuaded the client to wait for ads until all four sites were live. Fake test enquiries found **4 silent failures**; all fixed.
- Reply time fell from **4-8 hours to about 30 minutes**. Cost per lead fell from **CA$80 to CA$43**, shared with the ads marketer who tuned the campaign. One landing page brought **30 leads** in two 24-day sprints.

Internal tools - Creator, built with Claude and Codex

- flowmap walks a live web app and lays each screen out as a FigJam flow board. ExportKit is a Figma Community plugin that exports images as WebP and AVIF.

SKILLS

Product: requirements documents (SRS), scope and phase planning, roadmaps, prioritisation, user acceptance testing (UAT), stakeholder management, success metrics and KPIs, user roles and permissions

Design: user flows, journey maps, prototyping, design systems, developer handoff, gap analysis

Tools: Jira, Linear, Notion, Google Sheets, Excel, Figma, FigJam, HubSpot, GA4, Google Tag Manager, Microsoft Clarity

Technical: HTML, CSS, JavaScript, Node.js, AI agents (Claude, Codex) for testing and building tools

EDUCATION

Bachelor of Engineering (B.E.) in Computer Engineering, University of Mumbai, 2024
